Note: Illustrative change in annual NII does not adjust for potential changes in the credit market, credit quality, size and composition of the assets in the portfolio and is implied using a base rate of 4.08%. It also does not adjust for other business developments, including future originations and repayments. Accordingly, no assurances can be given that actual results would not differ materially from the table above. Additionally, this analysis includes the impact of the effective hedge through the interest rate swap associated with the September 2031 Notes.
